

## Mathematics

Mathematics is a science that came from the humans' need to count, measure and describe the form of objects. It is fundamental, and acts as the language of other sciences, helping reveal their structural interrelation and contributes to discovering the general laws of nature. As of today, mathematical science plays a leading role in developing computational tools and counting procedures for research, management, economics, IT and AI development.

The competition's tasks in mathematics are aimed at students enrolled in natural sciences and engineering programs.
