

# Postgraduate track Program: Urbanism and civil engineering

## 1. Olympiad winner's skill set

To win the international Open Doors Olympiad in this track you should have in-depth knowledge and skills in various areas, namely:

- mechanical systems, stresses, strains, forces and displacements of building structures and design solutions for structures, buildings and facilities.
- basics of construction technology, basic principles of organization and design of elements and systems of transportation complexes.
- basics of urban planning, social aspects of urban planning and modern trends in digitalization.

You should also have a solid command in the following skills:

- calculating stiffness, strength and stability of structural elements, buildings and structures (tension-compression, torsion, shear, bending, combined loading)
- be able to implement a simplified design scheme and analytical dependencies of element operation, design and quality control of construction materials.
- principles of urban area development and transportation infrastructure design.

## 2. List of degree programs covered by the subject area

### 2.1. List of master's programs

07.04.02 Reconstruction and restoration of architectural heritage

07.04.03 Architectural environment design

07.04.04 Urban planning

08.04.01 Civil Engineering

### 2.2. List of doctoral programs

2.1.1 Construction of buildings and facilities

2.1.2 Foundation and underground structures

2.1.3 Heat supply, ventilation, air conditioning, gas supply, and lighting

2.1.4 Water supply, sewerage, and water resources management

2.1.5 Civil engineering materials and products

2.1.6 Hydraulic engineering, hydraulics and engineering hydrology

2.1.13 Urban and rural settlement planning

2.1.14 Life cycle management of construction projects

2.1.7 Civil engineering technology and organization

2.1.8 Design and construction of roads, subways, airfields, bridges and transport tunnels

2.1.9 Structural mechanics

2.1.15 Construction site safety

## 3. Content

**ONE CLICK TO OPEN ALL DOORS**

od.globaluni.ru

## **Design and construction of civil buildings**

### Strength of materials

1. Types of loading.
2. Stress. Normal stress. Shear stress.
3. Strain.
4. Mechanical properties of materials. The stress-strain diagram. Stress-strain behavior of structural material. Hooke's law. Modulus of elasticity. Resistability.
5. Tension and compression. Statically determinate and indeterminate systems.
6. State of stress.
7. Geometric properties of an area. Center of gravity. Moment of inertia for an area. Polar moment of inertia.
8. Torsion. Torsion stress.
9. Bending. Shear force and bending moment diagrams. Flexural stresses.
10. Combined loading.

### Basics of designing structures, buildings, and facilities

1. Basis of building structural systems and their structural components;
2. Design basis for timber structures;
3. Design basis for steel structures;
4. Design basis for reinforced concrete structures;
5. Buckling of structural components.

### Urban planning

1. The history of the urban development spaces. The main schools and theories of urban studies.
2. Models of modern cities. Problems and trends in the development of the urban environment.
3. The social environment of the city.
4. Urban transport.
5. Green spaces in the urban environment.
6. Digitalization processes in modern urban planning.

## **Construction technology**

1. Construction technologies and methods.  
Monolithic construction.  
Panel and block construction.  
Modular and frame construction.
2. Methods and technologies for quality control in construction works.  
Non-destructive and destructive testing methods.  
Automation of quality control processes.
3. Organization of construction production and project management.  
Planning of construction production.  
Construction project management.  
Building information modeling (BIM).
4. Economic efficiency and optimization of construction projects.

- Cost reduction while maintaining quality.
- Optimization of construction process logistics.
- Risk management in construction.
- 5. Sustainable construction and environmental aspects.
  - Energy conservation and energy efficiency of buildings and structures.
  - Use of renewable energy sources.
  - Implementation of green building principles.

## Transport system

- 1. Transport network
- 2. Types of transport and their characteristics
- 3. Transport infrastructure
- 4. Public transport services
- 5. Logistics
- 6. Transport planning and modeling
- 7. Digital technologies in transportation
- 8. Intelligent transportation systems
- 9. Technosphere safety in transportation

## Mechanics

### Structural mechanics

- 1. Statistically determinate and statically indeterminate rod systems.
- 2. Geometrically unstable and geometrically stable rod systems.
- 3. Structural analysis of statically determinate multispan hinged beams.
- 4. Structural analysis of statically determinate frames with closed boundary shape.
- 5. Structural analysis of statically determinate trusses.
- 6. Calculation of displacements in statically determinate frames and beams.
- 7. Calculation basis of statically indeterminate rod systems by force method.
- 8. Calculation basis of statically indeterminate rod systems by the displacement method.

### Theory of elasticity

- 1. The Stress Tensor.
- 2. Principal Stresses, Principal Stress Directions.
- 3. Deviator and Spherical Stress States.
- 4. Hooke's Law for Isotropic Media.
- 5. Infinitesimal Deformation Theory.
- 6. Plane Elasticity.

## Materials Science – assessment and testing

- 1. Basics of building materials science. Structures of materials.
- 2. Physical properties. Density, apparent density, bulk density. Specific gravity. Porosity.
- 3. Thermal properties. Temperature. Specific heat. Thermal conductivity and heat capacity.
- 4. Cement. Composition. Properties.
- 5. Concrete. Types of concrete. Components of concrete. Aggregates for concrete. Testing. Mechanical properties.

6. Concrete mix design. The design of the mix proportion of concrete.
7. Wall materials. Bricks. Blocks. Plates.
8. Steel. Steel for different applications. Testing. Mechanical properties.
9. Wood. Structures of wood. Testing. Mechanical properties.
10. Heat-insulating materials.

## 4. Recommended references

### 4.1. Reading list

#### 4.2. Recommended online courses

##### Design and construction of civil buildings

Online courses in English	Link	Summary
<b>Strength of materials</b>		
Strength of Materials	<a href="https://freevideolectures.com/course/96/strength-of-materials">https://freevideolectures.com/course/96/strength-of-materials</a>	The objective of the present course is to acquaint the students with the concept of load resultant, consequences and how different types of loads can be withstood by different types of members with some specific materials. The NPTEL lecture series on Strength of Materials is designed to explain the fundamentals in a simple and clear manner so that the students can grasp the basics of applying the loading system and its consequence in a deformable body.
Strength of Materials	<a href="https://freevideolectures.com/course/2361/strength-of-materials">https://freevideolectures.com/course/2361/strength-of-materials</a>	Solids Mechanics - Analysis of Stress and Strain - Analysis of Stress Continued - Analysis of Stress Continued - Shear Stress - Graphical Solution Mohr's Stress Circle - Illustrative Problem - Analysis of Strain - Principles of Strain - Stress-strain Relationships - Elastic Constants (Relation b/w E,K and U) - Uniaxial Tension Test - Conditions Affecting Mechanical Properties - Members subjected to Uniaxial Stress - Thermal Stress - Members subjected to Axisymmetric Loading - Change of Dimensions - Generation of Shear Stress - Simple Torsion Theory - etc.
Mechanics of Materials I: Fundamentals of Stress & Strain and Axial Loading	<a href="https://www.coursera.org/learn/mechanics-1">https://www.coursera.org/learn/mechanics-1</a>	The course covers basic topics on the fundamentals of calculating stress and strain and axial loading.
Mechanics of Materials III: Beam Bending	<a href="https://www.coursera.org/learn/beam-bending">https://www.coursera.org/learn/beam-bending</a>	The course covers basic topics on the basics of beam bending calculation.
Mechanics of Materials	<a href="https://www.coursera.org">https://www.coursera.org</a>	The course covers the basics of deflections,

IV: Buckling, Combined Loading & Failure Theories	Deflections, Combined Loading & Failure Theories	<a href="https://org/learn/materials-structures">org/learn/materials-structures</a>	buckling, combined loading & failure theories.
<u>Basics of designing structures, buildings, and facilities</u>			
Purdue University: Fundamentals of Prestressed Concrete		<a href="https://www.edx.org/course/fundamentals-of-prestressed-concrete/?index=product&amp;queryID=300976fdb04278e643e3931d3340dd95&amp;position=1&amp;results_level=first-level-results&amp;term=Concrete&amp;objectID=course-c5c761af-6422-4525-aafd-067fba41e43d&amp;campaign=Fundamentals+of+Prestressed+Concrete&amp;source=edX&amp;product_category=course&amp;placement_url=https%3A%2Fwww.edx.org%2Fsearch">https://www.edx.org/course/fundamentals-of-prestressed-concrete/?index=product&amp;queryID=300976fdb04278e643e3931d3340dd95&amp;position=1&amp;results_level=first-level-results&amp;term=Concrete&amp;objectID=course-c5c761af-6422-4525-aafd-067fba41e43d&amp;campaign=Fundamentals+of+Prestressed+Concrete&amp;source=edX&amp;product_category=course&amp;placement_url=https%3A%2Fwww.edx.org%2Fsearch</a>	On the edX platform, the course is developed in three 1-credit modules. - Prestressed Concrete Fundamentals (this course) - Prestressed Structures - Post-Tensioned Structures.
Purdue University: Design of Steel-Concrete Composite Structures		<a href="https://www.edx.org/course/design-of-steel-concrete-composite-structures?source=aw&amp;awc=6798_1609089823_3e479685e1ad2e0a90b69f81eb8b15c4&amp;utm_source=aw&amp;utm_medium=affiliate_partner&amp;utm_content=text-link&amp;utm_term=301045_https%3A%2F%2Fwww.class-central.com%2F">https://www.edx.org/course/design-of-steel-concrete-composite-structures?source=aw&amp;awc=6798_1609089823_3e479685e1ad2e0a90b69f81eb8b15c4&amp;utm_source=aw&amp;utm_medium=affiliate_partner&amp;utm_content=text-link&amp;utm_term=301045_https%3A%2F%2Fwww.class-central.com%2F</a>	This course covers the design of composite structures with emphasis on composite beams and floor systems, composite columns, and composite walls. - Define composite action and the effect of composite action on component behavior - Describe and evaluate applicable limit states for the design of composite beams, columns, and walls - Design composite beams, columns, and walls using AIS360 provisions.
Purdue University: Steel Beam and Plate Girder Design		<a href="https://www.edx.org/course/steel-beam-and-plate-girder-">https://www.edx.org/course/steel-beam-and-plate-girder-</a>	This course covers the design of built-up plate girders with emphasis on proportioning, shear and flexural strength,

	<a href="https://www.class-central.com/design?source=aw&amp;aw_w=6798_1609090130_1608fb92147fc5c1f7eeb3e7a6d1b5f9&amp;utm_source=aw&amp;utm_medium=affiliate_partner&amp;utm_content=text%20-%20link&amp;utm_term=301045_https%3A%2F%2Fwww.class-central.com%2F">design?source=aw&amp;aw_w=6798_1609090130_1608fb92147fc5c1f7eeb3e7a6d1b5f9&amp;utm_source=aw&amp;utm_medium=affiliate_partner&amp;utm_content=text%20-%20link&amp;utm_term=301045_https%3A%2F%2Fwww.class-central.com%2F</a>	and local/global stability.
Fundamentals of Structural Analysis	<a href="https://www.udemy.com/course/statics-for-engineering-undergrads/?utm_medium=website&amp;utm_source=archdaily.com">https://www.udemy.com/course/statics-for-engineering-undergrads/?utm_medium=website&amp;utm_source=archdaily.com</a>	The online course explores the problems of analysis and calculation of building structures.
<b>Urban planning</b>		
Shaping Urban Futures	<a href="https://www.coursera.org/learn/shaping-urban-futures">https://www.coursera.org/learn/shaping-urban-futures</a>	This course examines the major directions for addressing the problems of global urbanization. The course demonstrates how an interdisciplinary approach reveals the interrelated issues of health, climate change, migration, and informality in places that will face the greatest challenges of rapid, unplanned urbanization.
Regional Planning: Basic Concepts and Its Contextualization	<a href="https://www.udemy.com/course/regional-planning/">https://www.udemy.com/course/regional-planning/</a>	This course contains the following sections: <ul style="list-style-type: none"> <li>• Discuss basic concepts and principles of regional planning;</li> <li>• Review the theories of regional planning;</li> <li>• Complete a case study of regional and urban issues;</li> <li>• Evaluate the current situation and future of the city in regional aspect.</li> </ul>
City Planning from Ancient Times to Today	<a href="https://www.udemy.com/course/city-planning/">https://www.udemy.com/course/city-planning/</a>	This course contains the following sections: <ul style="list-style-type: none"> <li>• History and theory of city planning from ancient times to modern day;</li> <li>• Innovations and debates in city planning.</li> <li>• Analysis of the key challenges facing city planners in the future, as well as some potential solutions.</li> </ul>
An Introduction to Urban Planning and	<a href="https://www.udemy.com/course/an-">https://www.udemy.com/course/an-</a>	This course contains the following sections: <ul style="list-style-type: none"> <li>• Basics of urban planning and Urban</li> </ul>

<u>Strength of materials</u>		
Сопротивление материалов (Material resistance)	<a href="https://openedu.ru/course/misis/MATSTR/?session=spring_2023">https://openedu.ru/course/misis/MATSTR/?session=spring_2023</a>	The course covers strength and stiffness calculations under various types of deformations - axial tension and compression, torsion, bending, shear and buckling, complex resistance; thin-walled shells and thick-walled pipes under internal and external pressure, stability of compressed beams under longitudinal forces, structural strength under cyclic loads and impact loads.
Сопротивление материалов. Часть 1. Основные положения, растяжение-сжатие прямолинейных стержней, кручение прямолинейных стержней, простой изгиб, сложный изгиб (Material resistance. Part 1. Fundamentals, tension-compression of straight rods, torsion of straight rods, simple bending, complex bending)	<a href="https://openedu.ru/course/mephi/mephi_sm1/">https://openedu.ru/course/mephi/mephi_sm1/</a>	This course covers the basic principles and assumptions of strength of materials, theoretical and practical aspects of strength and stiffness calculations for beam systems under various types of loading.
Сопротивление материалов. Часть 2. Теория напряжений, теория предельных состояний, устойчивость, толстостенные трубы, осесимметричные пластины (Material resistance. Part 2. Stress theory, theory of limit states, stability, thick-walled pipes, axisymmetric plates)	<a href="https://openedu.ru/course/mephi/mephi_sm2/">https://openedu.ru/course/mephi/mephi_sm2/</a>	This lecture course covers the analysis of statically indeterminate plane frames, theoretical and practical aspects of beam stability analysis. The course emphasizes problem solving.
<u>Basics of designing structures, buildings, and facilities</u>		
Основы расчета строительных	<a href="https://openedu.ru/course/spbstu/BASBUIL">https://openedu.ru/course/spbstu/BASBUIL</a>	During the course, a variety of construction designs are illustrated through numerous

конструкций (Basics of structural calculation)	D/  	examples, covering a wide range of materials and structural schemes.
<u>Urban planning</u>		
Устойчивое развитие транспортных систем городов (openedu.ru) (Sustainable development of urban transport systems (openedu.ru))	<a href="https://openedu.ru/course/spbstu/SDUTS/?session=spring_2024">https://openedu.ru/course/spbstu/SDUTS/?session=spring_2024</a>	The goal of this course is to provide the audience with a systematic knowledge of the characteristics of sustainable development of urban transport systems.
Общественные пространства (Public spaces)	<u>Общественные пространства — Архитекторы.рф</u> ( <a href="https://architects.ru/-80akijuiemcz7e.xn--p1ai">xn--80akijuiemcz7e.xn--p1ai</a> )	This course covers the basic principles of public space design.
Доступная и инклюзивная среда (Accessible and inclusive environment)	<a href="https://architectors.ru/courses/dostupnaya-i-inklyuzivnaya-sreda">https://architectors.ru/courses/dostupnaya-i-inklyuzivnaya-sreda</a>	This online course focuses on the design of accessible environments, the development of inclusive architectural solutions, and ways to integrate them into the urban fabric.

### Construction technology

Online courses in English	Link	Summary
Master of Science in Construction Management	<a href="https://www.coursera.org/degrees/ms-construction-management-lsu-online">https://www.coursera.org/degrees/ms-construction-management-lsu-online</a>	The construction management course covers the topics of professional services, including the supervision and control of the performance of tasks and activities during the construction phase.
Sustainable construction and environmental aspects	<a href="https://www.classcentral.com/course/construction-the-university-of-maryland-college-p-46427">https://www.classcentral.com/course/construction-the-university-of-maryland-college-p-46427</a>	This course covers sustainable construction management project elements from conception to completion.  Syllabus: <ul style="list-style-type: none"><li>● Week 1: Sustainable design management.</li><li>● Week 2: Sustainable construction management.</li><li>● Week 3: Sustainable maintenance operations, security systems, environmental management, and building systems.</li><li>● Week 4: Energy management and renewable energy, green building construction, and strategic sustainable planning.</li></ul>
Concrete Multi Storey	<a href="https://www.coursera.org">https://www.coursera.org</a>	The course covers the basics of structural

Building - System Design	<a href="https://www.classcentral.com/course/concrete-multi-storey-building-system-design">org/specializations/concrete-multi-storey-building-system-design</a>	design, taking into account the requirements of modern technologies. The course also touches upon the topics of load calculation, structural analysis, and reinforcement detailing in a hands-on manner. The practical emphasis ensures the ability to make informed design decisions, covers reinforcement detailing and methods for quantifying concrete and steel, and enhances project estimating skills.
Construction Project Management (class centre)	<a href="https://www.classcentral.com/course/construction-project-management-7105">https://www.classcentral.com/course/construction-project-management-7105</a>	Construction Project Management introduces learners to project initiation and planning. There are 10 modules that allow learners to become familiar with construction management within the dynamic construction industry.
<b>Online courses in Russian</b>	<b>Link</b>	<b>Summary</b>
Управление строительными проектами (Construction project management)	<a href="https://www.coursera.org/learn/construction-project-management">https://www.coursera.org/learn/construction-project-management</a>	The construction management course covers the process of planning, coordinating, and controlling all phases of construction, from design to completion of the finished project, building information modeling, and technology trends in projects.
Основы BIM для инженеров (BIM fundamentals for engineers)	<a href="https://www.coursera.org/learn/bim-fundamentals">https://www.coursera.org/learn/bim-fundamentals</a>	The course is designed for students to learn the essential concepts of BIM, and the basic technical skills to create and manipulate a BIM model. Those skills include how to retrieve information from a BIM model and how to use common modeling tools.
Технология строительного производства (ТСП) (Building technology)	<a href="#">Технология строительного производства (ТСП) – Stepik</a>	The aim of the course is to study the theoretical and practical foundations and methods of construction and installation work production.
